Forward Looking Statements

This presentation contains forward-looking statements (as defined in Section 21E of the Securities Exchange Act of 1934, as amended) which reflect CPLP management's current assumptions and expectations with respect to expected future events and performance. The statements in this presentation that are not historical facts, including, among other things, cash generation, future debt levels and repayment, assumed net book value, our ability to pursue growth opportunities, our expectations or objectives regarding future distribution amounts, distribution coverage, acquisitions, the capital reserve, future earnings, our expectations regarding employment of our vessels, redelivery dates and charter rates, fleet growth, market and charter rate expectations, may be forward-looking statements (as such term is defined in Section 21E of the Securities Exchange Act of 1934, as amended). These forward-looking statements involve risks and uncertainties that could cause actual results to be materially different from those expressed or implied in the forward-looking statements.

Factors that could cause actual results to be materially different include those set forth in the "Risk Factors" section of our annual report on Form 20-F filed with the U.S. Securities and Exchange Commission. Unless required by law, we expressly disclaim any obligation to update or revise any of these forward-looking statements, whether because of future events, new information, a change in our views or expectations, to conform them to actual results or otherwise. We assume no responsibility for the accuracy and completeness of the forward-looking statements. We make no prediction or statement about the performance of our units.

IMO 2020 Overview

<u>Overview</u>

- IMO 2020 regulation imposes a cap of 0.5% from 3.50% on maximum sulphur emissions for vessels globally.
- New limit comes into force on January 1, 2020.
- Vessels can meet new regulatory requirements by either using compliant fuel or through EGCS installation.
- **Expected impact on shipping:**
 - Increase in bunker prices at least until standardized compliant fuels become widely available.
 - Removal of vessel capacity for installation of scrubbers predominantly in 2019 and 2020.
 - Slow steaming and/or scrapping of older, less efficient vessels.
 - Ability of shipowners to pass on the increased bunkers cost to charterers in the form of increased freight/hire rates dependent on market conditions.

CPLP Strategy For IMO 2020

- Continued focus on period market, where charterers pay for bunkers cost.
- **EGCS** Installation important for CPLP and especially on larger vessels, in order to:
 - I. Maintain appeal of our vessels to charterers for long term period post 2020.
 - II. Capture part of the bunker savings delivered to charters through the installation of EGCS.
 - **III.** Secure attractive returns, where possible on the EGCS CAPEX investment.
- Booked with a reputable Asian manufacturer the procurement of EGCS for up to 14 vessels.
- Final EGCS installation decision depending on charter profile and type of vessel.
- Financing of EGCS CAPEX under discussion pending order finalization.
- For 5 x 5,000TEU vessels already secured rate increase by \$4,900 to \$34,250 from \$29,350 gross per day⁽¹⁾ once scrubbers are installed or Jan 2020, whichever is later until end of the respective charter.
- HMM agreement implies repayment in less than 1.7 years for EGCS total installation cost.

⁽¹⁾ Under a restructuring agreement with HMM the charter rate is \$23,480pd until December 31, 2019 and it will be restored to its original level of \$29,350pd thereafter.
